(1) Bestom tongenten till kurvon
$$y = f(\frac{4}{x+5})$$
, i punkten $P: (-3, 9(-3))$.

$$(g(-3) = f(\frac{4}{3+5}) = f(2) = 8$$

 $g'(x) = \frac{1}{4x} f(\frac{4}{x+5}) = f'(\frac{4}{x+5}) \cdot (-\frac{4}{(x+5)^2})$

$$g(-3) = f(2) \cdot \frac{-4}{2^2} = 4(-1) = -4$$

och darmed att en existion for tangenten i Par y - 9(3) = 9(3)[x - (3)]

$$\int dx \, f(x) = \int dx \, x \, e^{-x/5} = x \left(5e^{-x/5} \right) - \int dx \, 1 \left(5e^{-x/5} \right)$$
$$= -5x \, e^{-x/5} - 25e^{-x/5} + C = C - 5(x+5)e^{-x/5}$$

$$\frac{(e^{x}-x-1)\times}{x-\sin(x)}=(\infty)$$

Vi har all
$$f(x) = \frac{\left(1 + x + \frac{1}{5}x^2 + O(x^3) - x - 1\right)x}{x - \left(x - \frac{x^3}{6} + O(x^5)\right)}$$

$$(x - (x - \frac{x^3}{6} + 0(x^5)))$$

$$=\frac{\left(\frac{1}{2}x^2+0(x^3)\right)x}{\frac{x^3}{6}+0(x^5)}=\frac{x^3\left(\frac{1}{2}+0\infty\right)}{x^3\left(\frac{1}{6}+0(x^2)\right)}$$

I en punktered omgivning till punkten O, och darmed alt

$$\lim_{x\to 0} |\cos(\frac{1}{2}x)| = \lim_{x\to 0} \frac{1}{2} \frac{1}{2} \frac{1}{2} \cos(\frac{1}{2}x) = \lim_{x\to 0} \frac{1}{2} \cos$$
